Executive Overview — Key Performance Indicators

The following figures represent the top-level performance metrics for Great Southern Bancorp across fiscal year 2023. These KPIs form the foundation of the analysis presented in this report.

5K

Total Customers

Active customer base served across all branches

99

Branch Network

Operational branches across the United States

5K

Transactions

Total transactions processed in 2023

127.51M

Total Loans

Aggregate loan value disbursed across all categories

12.54M

Transaction Volume

Total monetary value of all processed transactions

300

Anomalies

Flagged irregular transactions — 6% of total volume

Customer Analysis — Demographics & Segmentation

Customer data was analyzed across four key dimensions: age group, city, gender, and account type. The bank's 5,000 customers were segmented into four age brackets to enable more meaningful behavioral and marketing insights.

Young Adults (18–30)

Largest segment. Gen-Z and young millennials dominate the base. High digital engagement, social media native, value-driven consumers.

Early Career (31–43)

Second largest group. Actively building financial portfolios — key targets for mortgage, auto, and investment products.

Mid Age (44–56)

Stable income earners. Focus on wealth preservation, savings products, and long-term loan management.

Seniors (57–70)

Smallest segment. Require high-touch service, branch proximity, and retirement-focused financial planning.

Three Strategic Insights

Insight 1 — Youth-Dominant Base

The highest concentration of customers falls in the Young Adults (18–30) bracket. This calls for a **Gen-Z brand repositioning** — hosting events at universities, sponsoring youth competitions, and running social media campaigns that speak authentically to this generation's values.

Insight 2 — Female Majority

The majority of account holders identify as **female**. This is a significant brand opportunity in the current cultural climate. Campaigns highlighting women's empowerment — such as offering **reduced-interest startup loans for women entrepreneurs** — would resonate deeply and differentiate the bank competitively.

Insight 3 — West Coast Concentration

Customer density is highest in **West Coast cities** (San Jose, San Francisco, Tucson, Seattle, Washington). Marketing efforts should align with regional cultural moments — local festivals, community events, and area-specific digital content — to deepen brand roots in these markets.

Social Media Persona Recommendation: Based on the data, the bank's ideal marketing persona is a **25-year-old female living on the West Coast**. All content, tone, and campaign strategies should be designed with this persona as the primary audience.

Transaction Analysis — Patterns, Categories & Opportunities

Total transaction volume reached **12.54M** across **5,000 transactions**, with an average transaction value of **2.51K**. The data reveals clear behavioral patterns that offer compelling partnership and revenue opportunities.

Peak Activity — March

Transaction volume spiked significantly in March 2023, coinciding with the **National Cherry Blossom Festival in Washington, D.C.** — one of the bank's highest-density customer cities. This validates the strategic value of aligning promotions with regional cultural and national events.

Quarterly Trend Observation

Transaction activity showed strong early-year momentum with Q1 peaks, modest mid-year stabilization, and a gradual recovery heading into Q4. This seasonal pattern should inform future campaign scheduling and staffing allocation across branches.

Top Transaction Categories & Strategic Actions

Groceries & Shopping

Highest transaction categories. Partner with major West Coast supermarket chains and retail outlets to offer **cashback rewards or loyalty coupons**. This creates a mutually beneficial loop — customers spend more, merchants gain volume, and the bank deepens daily-life relevance.

Bills — Underutilized

One of the lowest transaction categories. A strategic partnership with utility providers — electricity, water, or internet companies — could unlock a recurring, high-frequency transaction stream and increase the bank's share of household financial activity.

Entertainment & Dining

Moderate transaction volumes in entertainment and dining categories suggest appetite for lifestyle spending. Festival-tied promotions or dining reward programs could convert occasional spenders into regular card users in these categories.

Loan Portfolio — Volume & Composition

The total loan portfolio stands at **\$127.51M**, with an average loan value of **\$25.50K**, a minimum of **\$1.01K**, and a maximum of **\$49.99K**. The portfolio is distributed across three primary loan types: Mortgage, Auto, and Personal.

Mortgage Loans

Largest category by both volume and total value. Mortgages represent the bank's most significant asset class and offer the most stable long-term revenue stream due to high collateral security.

Auto Loans

Mid-tier category by volume. Auto loans offer moderate risk with tangible collateral. A consistent performer across both urban and suburban customer segments in the West Coast region.

Personal Loans

Highest interest rate category due to unsecured nature. While smaller in volume relative to mortgages, personal loans are a profitable margin contributor that requires careful credit risk management.

Strategic Recommendation: The dominance of mortgage loans presents a clear opportunity to establish **formal partnerships with real estate companies, new residential compounds, and urban development firms**. Such partnerships would streamline the customer journey from property selection to loan approval — reducing friction, increasing conversion rates, and positioning the bank as the preferred financial partner in West Coast real estate markets.

Loan Status & Risk Analysis

Loan performance was evaluated across two key status dimensions: **approval vs. rejection rates**, and the **closure rate of approved loans**. These metrics together paint a complete picture of portfolio health and lending efficiency.

Approval Rate

Slightly over half of all loan applications received approval — indicating a balanced, credit-disciplined underwriting approach.

Rejection Rate

Nearly half of applications were declined, reflecting rigorous credit standards that protect the bank's asset quality and minimize default exposure.

Closed Loan Rate

Nearly half of all approved loans have already been closed, signaling healthy loan lifecycle turnover and prompt repayment behavior among borrowers.

Interest Rate & Loan Term Insights

Across all three loan categories, the average loan term holds remarkably uniform at approximately **37 months**. Despite this shared duration, interest rates vary inversely with collateral quality — reflecting a textbook risk-adjusted pricing model:

Personal Loans — 5.65% Highest interest rate due to unsecured nature. No collateral backing means the bank charges a premium to offset default risk. Strong margin contributor.	Auto Loans — Mid Range Vehicle-backed collateral places auto loans in the middle tier of the risk-pricing curve. Steady performance with manageable default exposure.	Mortgage Loans — 5.42% Lowest rate due to high-quality real estate collateral. Long-term stability and asset security justify the lower yield, supporting sustainable portfolio growth.
This pricing structure confirms a disciplined, risk-based lending model. Profitability is correctly aligned with risk — ensuring that higher-risk instruments command higher yields while secured assets support volume-driven, stable revenue.		

Cards, Anomalies & Credit Operations

Credit Card Portfolio

Total Credit Capacity: \$27.75M — this represents the maximum simultaneous liability exposure if all customers were to utilize their full credit limit concurrently. The bank must maintain sufficient liquidity reserves to cover this ceiling.

Total Credit Balance: \$12.44M — the actual outstanding amount currently owed by customers on their credit cards, representing roughly 44.8% utilization of total capacity.

Card Type Distribution

MasterCard is the most widely held card type in the portfolio, followed by AMEX and Visa. MasterCard's dominance makes it both a key revenue driver and, as the feedback data reveals, the most important relationship to actively manage for customer satisfaction.

The bank should ensure co-brand agreements and service-level commitments with card networks are regularly reviewed to maintain competitive product offerings.

Transaction Anomalies — Resolution Status

300 Total Anomalies

Out of 5,000 total transactions, 300 were flagged as irregular — representing a **6% anomaly rate**. This is within an acceptable operational range and reflects the effectiveness of the existing fraud detection system.

167 Resolved

55.7% of anomalies have been successfully investigated and resolved. The resolution team has managed the majority of cases effectively, demonstrating operational responsiveness.

133 Pending

44.3% of anomalies remain unresolved and pending investigation. This backlog warrants immediate attention — unresolved anomalies increase regulatory exposure and customer risk.

The **133 pending anomalies** require prioritized resolution. A dedicated task force or escalation protocol should be established to clear this backlog within the next reporting cycle.

Customer Feedback & Complaints Analysis

Customer feedback was categorized into three types: Suggestions (33.78%), Complaints (33.62%), and Praise (32.60%). The near-equal distribution is concerning — complaints approaching one-third of all feedback signals systemic service quality issues that demand structured intervention.

Suggestions

Constructive input from customers — a valuable pipeline for product and service improvement initiatives.

Complaints

High complaint rate demands urgent attention. Root cause analysis by branch and card type is essential.

Praise

Positive sentiment exists — identify what these branches and processes do right and replicate across the network.

Complaint Hotspots — Where Action is Needed

High-Risk Branches

While **San Jose** and **Tucson** show high complaint volumes, their large customer bases partially explain the absolute numbers. However, **Indianapolis, Colorado Springs, and Louisville** are flagged as critical concerns — these branches carry disproportionately high complaint rates relative to their smaller customer populations. Immediate operational reviews and management meetings are recommended for these locations.

MasterCard Complaint Issue

MasterCard accounts for the highest complaint volume among all card types — significantly above AMEX and Visa. A formal service review meeting with MasterCard representatives should be scheduled to identify root causes, whether technical, billing-related, or service-level failures, and establish a corrective action plan with clear timelines.

Strategic Recommendations — Actions to Take in 2024

The following strategic actions are derived directly from the 2023 data analysis. They are organized by priority and domain, forming a clear roadmap for operational and growth decisions in the year ahead.

01	02	03
Build a Social Media Presence with a Defined Persona Establish active profiles across major platforms (Instagram, TikTok, LinkedIn). Create content designed for the 25-year-old West Coast female persona — the statistical center of gravity for the customer base. Prioritize authenticity, financial literacy content, and community engagement.	Launch Women's Empowerment Financial Products Introduce a dedicated loan product with preferential interest rates for women-owned startups . Market it aggressively in alignment with feminist advocacy movements. This differentiates the bank while converting your largest demographic into long-term brand ambassadors.	Forge Retail & Utility Partnerships Partner with major grocery chains and shopping centers in West Coast cities to offer cashback or loyalty points. Simultaneously, engage utility providers to integrate bill payments natively, growing share in the currently underperforming bills category.
04	05	
Establish Real Estate Partnerships for Mortgage Growth Co-develop referral or embedded financing programs with real estate developers and new residential compounds. Given mortgage dominance, this pipeline can significantly increase qualified loan applications and reduce acquisition cost.	Resolve Pending Anomalies & Branch Complaint Issues Assign a dedicated team to clear the 133 pending anomalies. Schedule immediate operational reviews with the management of Indianapolis, Colorado Springs, and Louisville branches. Initiate a formal service improvement meeting with MasterCard.	

Executive Summary — 2023 Key Takeaways

Great Southern Bancorp demonstrated solid operational performance in 2023. The data reveals a bank with a well-defined customer base, a healthy loan portfolio, and clear pathways for targeted growth. The following summary consolidates the most critical insights and decisions from this report.

Customer Base: Young, Female, West Coast

The bank's core demographic is young adults (18–30), predominantly female, concentrated on the West Coast. All marketing, product design, and community engagement strategies must be calibrated to this segment for maximum ROI.

Transactions: Groceries Lead, Bills Lag

Grocery and shopping transactions dominate. The National Cherry Blossom Festival spike confirms the power of event-driven marketing. Bills remain underutilized — a clear partnership opportunity with utility providers.

Loans: Mortgage-Heavy, Risk-Balanced

Mortgages dominate the portfolio. A 51.20% approval rate reflects disciplined credit standards. The inverse relationship between interest rates and collateral quality confirms sound risk-based pricing. Real estate partnerships are the logical next step.

Complaints: Require Structural Response

With complaints representing 33.62% of all feedback and specific branches over-indexed on negative sentiment, a structured intervention — branch reviews, MasterCard meetings, and service audits — is non-negotiable.

Credit & Anomalies: Well-Managed with Pending Risk

\$27.75M in credit capacity is maintained with \$12.44M utilized (44.8%). The 6% anomaly rate is acceptable, but 133 pending cases demand urgent resolution to minimize regulatory and reputational exposure.

Bottom Line: Great Southern Bancorp is well-positioned for accelerated growth in 2024. The data is clear — lean into your youth-female-West Coast demographic, deepen community and commercial partnerships, and resolve the operational gaps in complaint management and anomaly resolution. The foundation is strong. The direction is defined. The next step is execution.
